The global Broadcast and Post Production Monitors market size is predicted to grow from US\$ 283 million in 2025 to US\$ 354 million in 2032; it is expected to grow at a CAGR of 3.3% from 2026 to 2032.

Broadcast and Post Production Monitors are display devices similar to television sets, used to monitor the output of a video-generating device, such as playout from a video server, IRD, video camera, VCR, or DVD player. It may or may not have professional audio monitoring capability. Unlike a television set, a video monitor has no tuner (television) and, as such, is unable independently to tune into an over-the-air broadcast like a television receiver.

Broadcast and post-production monitors are indispensable tools in the broadcasting, television, and film industries. With the widespread adoption of new technologies such as high definition (HD), ultra-high definition (UHD), and high dynamic range (HDR), market trends indicate a continuous increase in the demand for monitors. These monitors must possess high resolution, accurate color reproduction, and a wide color gamut to meet the high image quality standards of professional production teams. Furthermore, as production workflows become more digital and networked, remote collaboration has become more prevalent. Therefore, monitors also need to support remote access and multi-screen displays to accommodate the working needs of production personnel.
