The global Brushless Drills market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Brushless drills are power tools that use a brushless motor instead of a traditional brushed motor. Without brushes to cause friction and slow things down, brushless drills pack more power and torque.

Brushless motors have significantly higher efficiency and performance, and a lower susceptibility to mechanical wear than their brushed counterparts. Cordless drills with brushless motors came on the scene just within the last decade and quickly gained ground on traditional brushed models.
