The brushless motor external winding machine is a device specially used for the external winding process of the brushless motor stator. This type of winding machine uses a high-speed rotating winding head to accurately wind the wire into the slot outside the stator, realizing the automatic arrangement and neat arrangement of the coil. Its main features include high degree of automation, fast winding efficiency, high precision, low failure rate, and support for the adaptation of multiple specifications and wire diameters. External winding machines usually adopt advanced servo control systems and precise mechanical structures, and can flexibly adjust winding parameters such as the number of turns, wire diameter, winding method, etc. to meet the needs of different products. In addition, the equipment also has functions such as automatic wire changing, wire break detection and tension control, which greatly improves production efficiency and product consistency.
