The global Brushless Power Tools market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

When it comes to power tools, how a tool is engineered can make a big difference in power and longevity. While brushless DC motors are relatively new to power tools, the technology has been around for decades. Brushless motors are more energy-efficient than brushed, often running on battery power for up to 50 percent longer. Since brushless motors don't contain brushes that lose energy to friction, they have a longer battery life than brushed tools.
