BSL-2 Enhanced Laboratory is a laboratory that strengthens the laboratory's biological safety protection requirements through measures such as mechanical ventilation systems on the basis of ordinary biological safety level two laboratories. Before that, there were only differences in BSL-1/2/3/4 labs. For all BSL-2+, it is considered that most of the existing pathogenic microorganisms belong to the third category of pathogenic microorganisms, but the third category of pathogens is too broad, and there are not too high requirements for the construction of P2 laboratories, but for some infectious or dangerous If the virus is relatively high, it may not be particularly applicable, and there are risks. For example, the new crown, according to the standard, is not a second-type pathogenic microorganism, but it is too infectious when it is done in an ordinary BSL-2 laboratory, so it is independent Separated from the BSL-2+ laboratory.
