Bubble Beam Light, or Bubble Light, is a decorative lighting device that typically features a series of bulbs encapsulated in transparent plastic tubes filled with a liquid solution. The characteristic feature of this type of light is the creation of a "bubble beam" effect as the bubbles rise through the liquid when the bulb heats up. The light usually consists of one or more vertical strands, each containing one or more bulbs at intervals. As the light warms the air inside the tube, small air bubbles form and float upward, creating an enchanting, playful display reminiscent of vintage bubble lights often used for holiday decorations. In contemporary applications, LED technology might be integrated to create energy-efficient Bubble Beam Lights, which can still produce a similar visual effect while consuming less power. These lights are popular for their nostalgic appeal and can be found in various settings such as Christmas trees, window displays, and themed parties or events.

The global Bubble Beam Light market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
