Bubble gum base is the most basic chewing substance in bubble gum. It is an easy-to-chew solid that is non-nutritious, indigestible and insoluble in water. During the production process, the bubble gum base is used to carry sweeteners, flavors and other substances that are intended to be utilized.

The main function of the bubble gum base is to blow bubbles, so its formula contains high-grade artificial rubber or high-molecular polymers. In addition, depending on the flavor used, different fillers are used in the bubble gum base. For example, gum bases suitable for non-acid flavors use calcium carbonate as a filler, while gum bases suitable for acidic flavors use talc as a filler to avoid the chemical reaction between acid and calcium carbonate to produce gas.

The global Bubble Gum Base market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
