A buck-boost charging management chip is an integrated circuit used for battery charging, which can provide a stable output voltage and current suitable for battery charging, regardless of whether the input voltage is higher or lower than the battery voltage. The chip typically utilizes buck (step-down) or boost (step-up) conversion technology, automatically adjusting based on changes in the power supply voltage to ensure stable charging conditions. This improves charging efficiency and extends battery life. These chips are widely used in various electronic devices, such as smartphones, wearables, power tools, and electric vehicles, especially in applications where the battery voltage fluctuates significantly.
