The global Buck Regulator Chip market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The buck regulator chip is a power management chip that can efficiently convert the input voltage into a lower output voltage to supply various loads in the circuit system. The advantage of the buck regulator chip is that it can improve the efficiency of power conversion, reduce heat generation and power consumption, and is suitable for various portable devices and industrial applications. The principle of the buck regulator chip is to use switching elements (such as transistors) and inductors to form a pulse width modulation (PWM) circuit, and adjust the size and stability of the output voltage by controlling the switching frequency and duty cycle of the switching elements.
