According to our (LP Info Research) latest study, the global Bucky Paper market size was valued at US\$ million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Bucky Paper is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Bucky Paper market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Bucky Paper are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Bucky Paper. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Bucky Paper market.

Buckypaper is a thin sheet of carbon nano-abrasive paper that is approximately 50,000 times thinner than a human hair. When buckypaper is stacked and compressed, it creates a material that is 500 times stronger than steel and 10% the weight of steel. The material has properties such as thermal conductivity, low light reflectivity, high strength-to-weight ratio, electrical conductivity, and EMI shielding. Due to its unique performance and characteristics, it is widely used in different fields such as electronics, automobiles, manufacturing, defense, medical transplantation, and filtration. Carbon nanotube paper (bucky paper) is composed of a certain length of disordered carbon nanotubes, which has a specific surface area much larger than carbon fiber paper, strength similar to that of thermally conductive graphite sheets, good electrical and thermal conductivity and chemical stability, and is used in fuel cells. Gas diffusion layers, electrochemical

supercapacitors, lithium-ion battery cathodes, heat dissipation pads for high-power electronic devices, and high-performance polymer composite materials all have great application value. Carbon paper can be cleaned with pure water, dilute acid, dilute alkali, alcohol, and acetone. The strength of the wet state during the cleaning process is low. Do not stir or pull it. After cleaning, dry it with filter paper (or other absorbent materials that do not pollute the paper) and press it dry with a heavy object, otherwise it will warp. Soaking is generally not recommended for cleaning.

The upstream industry chain of Bucky Paper: the main raw material of carbon nanotube paper is carbon nanotubes, and the downstream industry chain: the main application fields of carbon nanotube paper include lithium batteries, conductive plastics, electromagnetic shielding, biosensors, medical equipment, etc. These fields are important components of strategic industries such as new energy, new materials, and new technologies. The market size of China's nanomaterials industry has grown from 48.13 billion yuan in 2014 to 161.48 billion yuan in 2022, with a compound annual growth rate of 16.33%. It is estimated that by 2025, the market size of China's nanomaterials industry will reach nearly 400 billion yuan, of which carbon nanotubes will account for 10%, or about 40 billion yuan. Bucky paper is an emerging market segment of China's nanomaterials industry. According to company surveys, Bucky paper accounts for 0.57% of carbon nanotubes, which is a market size of 228 million.
