The global Buffer Oxide Etch market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Buffer Oxide Etch is a mixture of electronic-grade hydrofluoric acid, electronic-grade ammonium fluoride and ultrapure water. Surfactants can also be added according to process requirements. It is mainly used for etching oxide films in integrated circuits. The basic etchant in this product is electronic-grade hydrofluoric acid. The addition of electronic-grade ammonium fluoride can make the product more compatible with photoresist and the etching rate more stable. In addition, the addition of surfactants can reduce the surface tension of the product, enhance the wettability of the product, and ensure the uniformity of etching.

Globally, the Buffer Oxide Etch market is mainly concentrated in North America, Asia Pacific and Europe. Among them, the buffered oxide etching liquid market in the Asia-Pacific region has a faster growth rate. In this region, China, Japan and South Korea are the main players in the buffered oxide etching liquid market.

With the development of global and domestic display panel, semiconductor, solar cell and other industries, the market demand for buffered oxide etching liquid continues to increase, and the future development prospects of the industry are good.
