The research report highlights the growth potential of the global Building Energy Management Services market. Building Energy Management Services are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Building Energy Management Services. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Building Energy Management Services market.

Building Energy Management Systems (BEMS) are hardware-software systems installed in buildings that monitor and control the energy needs of a building to ensure efficient and economical energy utilization. These systems monitor a buildings energy consumption by electrical and mechanical equipment such as heaters, ventilators, air conditioners, and lighting to increase energy efficiency, and reduce energy costs. At present, building systems are integrated for better synchronization and monitoring of data on energy usage and better optimization. The next generation of BEMS are collaborating directly with utility enterprises so that the building owners are aware of when power rates and demand are lowest, allowing proper scheduling of high power use activities to help lower their costs. Energy efficiency, energy price volatility, and

government policies and incentive programs majorly drive the growth of this market. Factors such as high investment, and longer payback period are some of the challenges confronted with regards to installation and implementation of BEMS in various type of buildings.

This market research analysis identifies the increasing need to optimize energy consumption as one of the primary factors that will have a positive impact on the growth of the energy management services market in the next few years. Owing to various infrastructure development activities, the Middle East is witnessing a rapid increase in energy consumption. It has been observed that energy consumption in the Middle East was about 770 million tons of oil equivalent (MTOE) during 2015 and is expected to witness a growth rate of over 4% year-over-year during the forecast period. This will induce governments and enterprises in this region to optimize their energy usage. Moreover, the depleting oil resources will compel businesses to invest in alternate energy sources such as solar, wind, and bioenergy, which, in turn, will propel the need for energy management services.
