Building Lifecycle Management Software is a comprehensive digital platform integrating Building Information Modeling (BIM), the Internet of Things (IoT), asset management, and operation and maintenance data. It aims to provide seamless information flow and intelligent management of buildings throughout their entire lifecycle, from planning and design, construction, operation and maintenance, to final demolition. Its core functionality lies in using BIM as a carrier to centrally store and manage data across the entire building lifecycle, including geometric information, material properties, supplier information, installation dates, and maintenance records. Software functions encompass 3D visualized operation and maintenance, equipment ledger management, preventative maintenance planning, space management, energy consumption monitoring, and asset inventory. By breaking down information silos between the design, construction, and operation and maintenance phases, this software significantly improves facility management efficiency, reduces operating costs, and provides accurate data for subsequent renovations or demolitions.
