The global Building Mechanical Ventilation Systems market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

Building Mechanical Ventilation is a system used to remove contaminated indoor air and bring in fresh outdoor air to provide a healthy and safe working environment in residential, commercial, and industrial sectors.

A mechanical ventilation system consists of two main components—a fresh air supply system and an exhaust system.

The supply system comprises an air inlet, air filtering equipment, and air-conditioning system. Mechanical ventilation systems are designed to bring in outdoor air at a specific speed to match the type of work and the rate of contaminants released in a building or a workplace. Mechanical ventilation is preferred to control employee exposure to air contaminants.

Other benefits of mechanical ventilation include maintenance of temperature and humidity at comfortable levels, and reduction of potential fire or explosion hazards.
