The built-in orifice flowmeter is a flow measuring instrument, usually used to measure the flow of liquid, gas and steam. It is to install a flow meter with an orifice plate inside the pipeline to measure the fluid flow velocity, and then determine the flow rate through calculation.

Flowmeters, which are instruments used to measure the flow rate of liquids, gases, and steam in various industrial applications, have been subject to several global market trends and developments. These trends are driven by technological advancements, regulatory changes, environmental concerns, and the need for accurate flow measurement. The integration of digital technologies, including sensors, wireless communication, and data analytics, has given rise to smart flowmeters. These meters offer real-time data collection, remote monitoring, and predictive maintenance, enhancing overall efficiency. The Internet of Things (IoT) and Industry 4.0 concepts are influencing the flowmeter market. These technologies enable the collection and analysis of flow data for process optimization and automation. The global flowmeter market is expected to continue evolving as technological advancements and regulatory changes drive the adoption of more accurate, efficient, and data-driven flow measurement solutions. Flowmeters play a vital role in various industries, including oil and gas, chemical processing, water management, and HVAC, where accurate flow measurement is essential for process optimization and compliance.
