## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The Built-in Pump for Isolator can be combined with aseptic detection kit to form a sterile detection system. It is a new generation of sterile test pump, which has many new functions such as direct installation, automatic fixing, and pressure security protection. Under the positive pressure generated by the peristaltic pump, the sample is transferred to the tank. Microorganisms were captured by the built-in membrane in the tank and washed the film (if necessary) to remove antibacterial ingredients. Finally, the medium pump is put into the tank. The cultivation tank is used to check whether the sample contains microorganisms. The operation process is closed and non-contact, minimizing pollution risks.
