When transporting temperature-sensitive products, the main problem in the transportation company is the transportation of goods. Fluctuations in temperature can damage the goods being shipped, causing monetary losses to investors. Bulk insulated containers have been used in many industries including pharmaceutical, food and beverage, chemical, automotive and consumer products. This kind of packaging cannot prevent the goods from being affected by heat fluctuations and moisture. Bulk insulated containers are a more effective form of packaging, and may increase the growth of the bulk insulated container market.
