The global Bulk Material Drag Chain Conveyor market size is predicted to grow from US\$ 992 million in 2025 to US\$ 1321 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

A bulk material drag chain conveyor is a type of mechanical conveyor used to transport a wide variety of bulk materials, such as powders, granules, pellets, or other loose materials, within a manufacturing or processing facility. It consists of a chain that moves along a predetermined path or circuit and is equipped with flights or paddles that are used to move the material forward. The chain operates within a closed trough or casing, preventing the material from spilling out during transportation.

Many industries are increasingly adopting automated material handling solutions to improve efficiency and reduce labor costs. Bulk material drag chain conveyors are being integrated into automated systems, allowing for precise control and monitoring of material flow.
