The global Bulk Ore Sorting System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Bulk ore sorting system refers to a system used to process large amounts of bulk ore and separate useful minerals in the ore from impurities such as gangue and waste rock through a series of physical and chemical methods. This type of system usually includes ore crushing, grinding, screening, gravity separation, magnetic separation, flotation, electric separation and other links, aiming to improve the grade and recovery rate of useful components in the ore.

With the continuous development of automation and artificial intelligence technology, the bulk ore sorting system will be further intelligent and automated. This includes the application of automated control systems, smart sensors, machine vision and machine learning algorithms to achieve ore composition analysis, sorting parameter optimization, equipment failure prediction and automatic maintenance, etc.
