Bullet Resistant Doors are specially designed security doors whose primary function is to provide ballistic resistance against bullets, bullets, or other ballistic threats. These doors are typically constructed from multiple layers of reinforced materials, such as steel, glass, and other high-strength alloys and composites, to provide additional protection in the event of a gunshot or attack.

Bullet Resistant Doors are usually used in places that require high security, such as vaults, government buildings, military facilities, police stations, banks and some commercial buildings, to reduce the risk of violent attacks and intrusions and protect the safety of people and valuable assets. These doors are designed to absorb and disperse ballistic impact energy, providing an additional safety barrier to enhance the overall security of the building.
