A Bungee Shock Cord is an elastic cord composed of one or more elastic strands forming a core, usually covered in a woven cotton or polypropylene sheath. The sheath does not materially extend elastically, but it is braided with its strands spiralling around the core so that a longitudinal pull causes it to squeeze the core, transmitting the core's elastic compression to the longitudinal extension of the sheath and cord.

A significant factor driving the bungee cord market is the rapid growth of adventure games in developing countries. Because bungee cords are affordable and used as the most comfortable piece of safety equipment, it's one of the few products to choose first before adventure sports. Portability of bungee cords and accessories has led to high growth of the market.
