The global Burglar Alarms market size is predicted to grow from US\$ 4163 million in 2025 to US\$ 5921 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

Burglar alarms are electronic devices used for intrusion detection and security alerts. They detect unauthorized opening, movement, or vandalism through sensors and trigger alarms via sound, light, and network notifications. They are widely used in residential, commercial, and industrial security scenarios.

Upstream applications mainly include sensors (infrared, door/magnetic, vibration), chips and modules, batteries, buzzers, communication devices, and housing materials. Downstream applications cover home security, shops and offices, warehouses and industrial facilities, as well as integration services with property management, security platforms, and smart home systems.

In 2025, the global average price of a burglar alarm was \$35 per unit, with annual sales of approximately 121.6 million units and a global annual production capacity of 20,000 units. The industry profit margin was 30%.

The future development of burglar alarms presents three major trends:

Burglary alarms will evolve from single alarm devices to intelligent security nodes, integrating AI recognition and multi-sensor fusion technologies to effectively reduce false alarm rates. They will also connect with cameras, access control systems, lighting, and smart home systems to form a comprehensive security solution.

Wireless communication, low-power design, and cloud platform management are rapidly becoming more widespread, enabling more flexible device deployment and

significantly enhanced remote monitoring and centralized operation and maintenance capabilities, meeting the large-scale management needs of residential, commercial, and distributed scenarios.

While maintaining stable growth in the residential and commercial markets, burglar alarms are expanding into scenarios such as warehouses, industrial parks, public facilities, and smart cities, placing higher demands on reliability, stability, and system-level security.
