The global Business Records Storage Services market size is predicted to grow from US\$ 5694 million in 2025 to US\$ 8003 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

Business record storage service refers to a service provided to enterprises or organizations to preserve, manage and access various records, documents and data generated in business activities in electronic or paper form. This service is designed to ensure the integrity, accuracy and accessibility of business records to meet the needs of daily operations, tax audits, legal compliance and other aspects of the enterprise.

The growth of the commercial records storage service market is primarily driven by corporate compliance and retention requirements, the vast volume of existing paper archives, tightened industry regulations, the need to reduce costs through outsourcing, and the digital transformation of records management. Sectors such as finance, healthcare, law, government, education, energy, and large corporate groups generate massive quantities of contracts, vouchers, medical records, audit materials, personnel files, engineering documents, and legal papers during daily operations. These records typically require long-term preservation?mandated by regulations or internal policies?and must be readily accessible for audits, litigation, regulatory inspections, and business traceability. Compared to in-house archives, third-party commercial records storage services offer specialized capabilities?including off-site storage, access control, climate control, fire and theft protection, retrieval and delivery, on-demand scanning, scheduled destruction, and compliance certification?thereby helping clients reduce facility, labor, and management costs. Meanwhile, corporate digital transformation has not eliminated paper records; instead, it has spurred an upgrade toward integrated services combining physical storage, scanning, electronic indexing, and lifecycle

management, shifting the industry from traditional box storage to comprehensive information governance and end-to-end records management.
