Button Control Light Stick usually refers to a light stick that can control its light state (such as color, brightness, flashing mode, etc.) by key operation. The shell is generally made of plastic or other lightweight and durable materials to protect the internal circuit and LED light. Built-in LED lamp beads of multiple colors can emit light of different colors. The circuit board contains control circuits and power circuits for realizing functions such as key control and light effect switching. The buttons are located on the shell of the light stick and are usually used to control the power switch and the switching of different light effects.

Concerts and music festivals are the main drivers of the growth of the Button Control Light Stick market. In 2020, market demand plummeted due to the impact of the COVID-19 epidemic. The market experienced some fluctuations in 2021 and 2022. By 2023, as the epidemic was brought under control, the market recovered quickly, especially in China, with explosive growth.
