The global Butylchlorodihydroxytin market size is predicted to grow from US\$ 15.05 million in 2025 to US\$ 19.09 million in 2032; it is expected to grow at a CAGR of 4.0% from 2026 to 2032.

Monobutylstannic acid (MCPA), also known as dihydroxybutyltin chloride, is typically used as an intermediate in organotin compounds, primarily in the fields of PVC plastic stabilizers and catalysts. It exhibits specific chemical structural characteristics at room temperature.

The upstream of MCPA is directly linked to the tin metal processing industry and basic chlorination industry. Its main raw materials include metallic tin, tin tetrachloride, and butyltin trichloride. The core of its production process lies in the butylation reaction and controlled hydrolysis, requiring high levels of corrosion resistance in the reaction vessel and effective separation and recovery of the byproduct hydrochloric acid. Fluctuations in the price of metallic tin are the decisive factor affecting its downstream production costs.

Global sales in 2025 were approximately 633 tons, with an average selling price of US\$24.3 per kilogram. The industry's gross profit margin was around 25%.

United States market for Butylchlorodihydroxytin is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Butylchlorodihydroxytin is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Butylchlorodihydroxytin is estimated to increase from US\$ million in
