In 2024, global production of C-Band ASE Broadband Light Source reached approximately 55,000 units, with an average selling price of approximately US$5,400 per unit. C-Band ASE Broadband Light Source is a broadband light source based on erbium-doped fiber and a pump laser, generating a broad spectral output through amplified spontaneous emission. It primarily utilizes erbium-doped fiber under the action of a specific pump laser to emit a broad spectrum of light in the 1528-1563nm (C-band) wavelength range. It features high spectral density, wavelength stability, and stable output power, making it widely used in fiber optic passive component testing, spectral analysis, and fiber optic sensing.

The upstream supply chain for C-Band ASE Broadband Light Source centers on semiconductor pump laser chips, specialty optical fibers, fiber Bragg gratings, and related optical components and chips. Its downstream applications are concentrated in fiber optic sensing systems, optical coherence tomography medical imaging equipment, and test and measurement systems for optical communication passive components.
