The global C-Mount Extension Tube market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

C-Mount Extension Tubes are designed to act as spacers for C-Mount and CS-Mount instruments. These extension tubes increase the image distance between the lens and the camera sensor. This allows the lens to focus on objects at a shorter distance than would be possible without the spacer. The reduction in object distance increases the magnification of the image on the camera sensor, while decreasing the depth of field.
