C-UAS (Counter-Unmanned Aircraft Systems) for airports refers to a set of technologies and strategies designed to detect, track, and mitigate unauthorized or potentially harmful drone activity in and around airport environments. These systems aim to protect airspace from drone-related threats that could endanger aircraft operations, passenger safety, and airport infrastructure. C-UAS solutions typically integrate radar, radio frequency detection, and electro-optical sensors to identify drones, while employing countermeasures such as jamming, capture nets, or even drones designed to intercept and remove rogue drones. The implementation of C-UAS systems is critical for maintaining secure air traffic operations and ensuring compliance with aviation regulations.
