Abstracts

The global C14-15 Dialkyl Carbonate market size is predicted to grow from US$ 6.07 million in 2025 to US$ 9.37 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

In 2024, global C14-15 Dialkyl Carbonate capacity 200 Tons, sales reached approximately 190 Tons, with an average market price of around 28 USD/Kg, industrial gross margin 24%.

C14-15 Dialkyl Carbonate is a mid- to long-chain dialkyl carbonate positioned as a “lightweight, high-performance” emollient. It is typically described as a low-pour-point, oxidation- and hydrolysis-stable liquid that delivers a non-oily, fast-absorbing skin feel and very good pigment and powder dispersion. Functionally it sits between classic ester oils and volatile silicones: C14-15 Dialkyl Carbonate softens the formula and improves spreadability, but with a drier after-feel than many triglycerides or benzoates, which is why it has become a go-to choice in Asian base-makeup and high-coverage formats.

On the technology and supply side, C14-15 Dialkyl Carbonate is produced by transesterification of dimethyl or diethyl carbonate with C14/C15 fatty alcohols, typically derived from petrochemical or oleochemical routes. Process development has focused on improving conversion and selectivity via optimized catalysts and continuous or reactive-distillation schemes, mirroring broader work on dialkyl carbonates as green carbonylation and solvent platforms. This places C14-15 Dialkyl Carbonate at the intersection of two strategic chains: carbonate chemistry on one side and mid-cut fatty alcohols on the other, so integrated producers with access to both intermediates and application labs tend to dominate supply.

In applications, C14-15 Dialkyl Carbonate is now a standard building block in modern color cosmetics and sun care. It is widely listed as a skin-conditioning emollient in ingredient databases and appears in foundations, cushions, lipsticks, sunscreens and brightening emulsions, usually paired with silicones and other esters to fine-tune glide, payoff and wear. Recent Japanese and Korean launches illustrate the pattern: ingredient disclosures for Meiko Cosmetics' Octard Cover Foundation updated in early 2025, for example, show C14-15 Dialkyl Carbonate as a front-row oil-phase component in a high-coverage foundation base, while published water-in-oil foundation prototypes from Japanese suppliers use trade-name grades such as Lialcarb SR-1000 at a few percent loading to stabilize pigments and enhance slip. In lip and cheek products, C14-15 Dialkyl Carbonate is positioned as the "texture corrector" that keeps payoff creamy without stickiness.

From a regulatory and safety perspective, C14-15 Dialkyl Carbonate is listed in major cosmetic ingredient inventories, and comprehensive safety assessments on the dialkyl carbonate family characterize it as low-toxicity and low-irritation when used at reported concentration ranges. That status underpins its broad use in leave-on face products, including around the eye area, which is often a bottleneck for newer synthetic oils. Public ingredient lists for Japanese brightening emulsions and whitening lotions, for instance, combine C14-15 Dialkyl Carbonate with humectants like glycerin and butylene glycol plus classic occlusive agents, suggesting that brand R&D teams view it as a "safe, non-controversial" way to upgrade sensorial performance without triggering additional regulatory complexity.

Looking forward, C14-15 Dialkyl Carbonate is well aligned with several structural trends. The shift toward silicone-light or silicone-reduced formulations creates room for high-purity ester oils that can partially substitute volatile and linear silicones while preserving slip and spread. "Clean" and "conscious" positioning favours emollients with clear toxicology files and potential biodegradability benefits, which supports a broader migration to dialkyl carbonates derived from renewable fatty alcohols. At the same time, work on dialkyl carbonates as green solvents and lubricant base stocks opens incremental demand in industrial and automotive fluids, where low pour point and oxidative stability are valued. For raw-material suppliers, this means C14-15 Dialkyl Carbonate is shifting from a niche sensory modifier into a multi-platform carbonate node: in personal care as a signature texture oil, in sustainable ester systems as a structural component, and in specialty fluids as a complementary base stock, with upside for players that can combine secure C14/C15 alcohol sourcing, differentiated grades and strong formulation support.

Report Scope

LP Information, Inc. (LPI) ' newest research report, the “C14-15 Dialkyl Carbonate Industry Forecast” looks at past sales and reviews total world C14-15 Dialkyl Carbonate sales in 2025, providing a comprehensive analysis by region and market sector of projected C14-15 Dialkyl Carbonate sales for 2026 through 2032. With C14-15 Dialkyl Carbonate sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US$ millions of the world C14-15 Dialkyl Carbonate industry.

This Insight Report provides a comprehensive analysis of the global C14-15 Dialkyl Carbonate landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyzes the strategies of leading global companies with a focus on C14-15 Dialkyl Carbonate portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms’ unique position in an accelerating global C14-15 Dialkyl Carbonate market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for C14-15 Dialkyl Carbonate and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global C14-15 Dialkyl Carbonate.

This report presents a comprehensive overview, market shares, and growth opportunities of C14-15 Dialkyl Carbonate market by product type, application, key manufacturers and key regions and countries.

Key Questions Addressed in this Report

What is the 10-year outlook for the global C14-15 Dialkyl Carbonate market?

What factors are driving C14-15 Dialkyl Carbonate market growth, globally and by region?

Which technologies are poised for the fastest growth by market and region?

How do C14-15 Dialkyl Carbonate market opportunities vary by end market size?

How does C14-15 Dialkyl Carbonate break out by Type, by Application?
