## Abstracts

The global C9 Aromatic Resin market size is predicted to grow from US\$ 2041 million in 2025 to US\$ 2735 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

C9 Aromatic Resin is thermoplastic resin produced through the polymerization of aromatic-rich C9 fractions derived from petroleum cracking. These resins typically exhibit a deep yellow to dark brown color, high softening points, and strong compatibility with other aromatic polymers and rubbers. Due to their tackifying, adhesion-enhancing, and viscosity-adjusting properties, C9 aromatic resin is widely used in applications such as printing inks, paints, adhesives, rubber compounding, and coatings. Their high polarity and excellent solubility in aromatic solvents make them especially suitable for formulations requiring strong adhesion and durability.

The market for C9 aromatic resin is driven by growing demand from key end-use industries such as adhesives, paints and coatings, rubber compounding, and printing inks. As industrial production and construction activities expand globally—particularly in emerging economies—there is increasing need for cost-effective tackifiers and performance enhancers in formulations. The superior compatibility of C9 aromatic resin with natural and synthetic rubbers, their strong adhesion properties, and ability to enhance durability make them indispensable in applications like tires, road marking paints, and packaging adhesives. Additionally, rising automotive production and infrastructure development further support the consumption of these resins in sealants, coatings, and rubber-based components.
