The global Cable Assembly market size is predicted to grow from US\$ 16630 million in 2025 to US\$ 20350 million in 2031; it is expected to grow at a CAGR of 3.4% from 2025 to 2031.

A cable assembly can be created using a number of different casings — straps, cable ties, cable lacing, sleeves, electrical tape, conduit, braiding, a weave of extruded string, or a combination of these materials – but the purpose is always to increase the efficiency of the products.

Cable assemblies are designed according to geometric and electrical requirements, which are translated into a diagram that is used in the preparation and assembly of the harness. First the wires are cut to the desired length followed by a marking process (either manual or automated) for identification purposes. Next, the wires are stripped to expose their metal cores and assembled together with any extra terminals or connectors housings required. The bundle is then clamped onto a form board or assembly fixture. This finished mass is fitted with any protective sleeves, conduit, or extruded yarn. The entire process is usually completed by hand because of the intricate processing required at various stages of production, such as routing the wires through sleeves, taping, crimping terminals onto wires, inserting one sleeve into another, and fastening the strands with tape, clamps, or cable ties.

Global Cable Assembly key players include RF Cable Assembly, 3M, TE Connectivity, Molex, Minnesota Wire, etc. Global top five manufacturers hold a share over 35%.

China is the largest market, with a share about 40%, followed by Europe, and United States, both have a share over 30 percent.

In terms of product, Data cable assembly is the largest segment, with a share over 40%. And in terms of application, the largest application is Communications, followed by Medical Equipment, Machine, Automotive, etc.
