Cable cylinder is a cable actuator that can be isolated from any work area with extended cable lengths for maximum application flexibility. Cable cylinders were the world's first “rodless” cylinders. By design a cable cylinder moves the workload along its body length, unlike a rodless cylinder which expands and retracts a piston rod almost 2 times its body length. The main advantage here is that cable cylinders save space.

The global Cable Cylinder market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
