The global Cable Operated Screen market size is predicted to grow from US\$ 77.11 million in 2025 to US\$ 106 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

Cable operated screen is a mechanical equipment used in wastewater treatment systems to remove large debris, solids, and floating objects from the influent wastewater flow. The cable operated screen consists of a series of rake bars or tines connected by cables or chains. The screen is inclined at an angle to the flow direction, allowing the influent wastewater to pass through while trapping and lifting the debris using the rake bars and cables. The debris is then transported and discharged into a collection system for proper disposal. Cable rake screens are commonly used in wastewater treatment plants, pump stations, stormwater management systems, and other water treatment facilities. They effectively remove large solids, trash, vegetation, and debris to help prevent clogging, protect downstream equipment, and maintain the efficiency and reliability of the treatment processes. These screens can be automated and can be programmed to operate at specific intervals or based on the flow rate. They are an important part of the initial wastewater treatment process, ensuring the effective removal of large solids before further treatment or discharge.

Global key players of Cable Operated Screen include Sorigu?, Ovivo, Dutco Tennant LLC, Passavant Geiger, Nanjing Lanshen Group, etc. The top five players hold a share about 45%. North America is the largest market for Cable Operated Screen and has a share about 32%, followed by Asia-Pacific and Europe, with share 31% and 31%, separately.

The operation of cable operated screens can be complex, requiring skilled personnel for

effective management and troubleshooting. In environments with high debris loads, there can be issues with clogging, necessitating more frequent maintenance and operational adjustments.

As the global population increases and urbanization progresses, the demand for sewage treatment generally increases. The high population density in urban areas has led to a corresponding increase in the amount of sewage generated. A large amount of wastewater and sewage is generated during industrial production, and increased industrial activities will also lead to an increase in sewage treatment volume. Increased environmental awareness and attention to sewage treatment have prompted society and companies to invest more resources to improve sewage treatment capabilities. These factors are driving the market growth of Cable Operated Screen. In terms of application, Sewage Treatment Plant is the largest application, occupied for a share of 55%.
