A cable-pull switch, also known as a rope-pull switch or emergency stop switch, is a type of electrical switch that is activated by pulling a cable or rope. These switches are often used in industrial settings, such as manufacturing plants and conveyor systems, to provide a quick and reliable way to stop machinery in the event of an emergency.

When the cable or rope is pulled, the switch mechanism inside the enclosure is activated, interrupting the electrical circuit and stopping the machinery. Cable-pull switches can have one or multiple switch contacts, and may be normally open or normally closed depending on the application.

Cable-pull switches are typically designed to meet specific safety standards and regulations, such as those set by the Occupational Safety and Health Administration (OSHA) in the United States. They are an important safety feature in many industrial applications and are essential for protecting workers and preventing accidents.
