The global Cable Pulls Sensors market size is predicted to grow from US\$ 3025 million in 2025 to US\$ 4328 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

Cable pull sensor is a device used to accurately measure linear displacement. It is widely used in industrial automation, engineering machinery, robotics, aerospace and other fields. It is connected to the moving object through a flexible steel cable. As the target object moves, the steel cable is pulled out or retracted, driving the internal precision encoder to rotate, thereby converting mechanical motion into electrical signal output. It has excellent anti-interference ability and environmental adaptability, and can work stably under harsh conditions such as high temperature, low temperature, humidity and vibration.
