Cable rake screen is a mechanical equipment used in wastewater treatment systems to remove large debris, solids, and floating objects from the influent wastewater flow.

The cable rake screen consists of a series of rake bars or tines connected by cables or chains. The screen is inclined at an angle to the flow direction, allowing the influent wastewater to pass through while trapping and lifting the debris using the rake bars and cables. The debris is then transported and discharged into a collection system for proper disposal.

Cable rake screens are commonly used in wastewater treatment plants, pump stations, stormwater management systems, and other water treatment facilities. They effectively
