Cable straightening machine is a piece of equipment used for the construction of cable accessories. A process in which a heating tape is wrapped around a certain area of the cable end and heated according to the specified time and temperature, then the cable is fixed on a straight object and naturally cooled to the ambient temperature to make the cable end become a straight line. Its purpose is to eliminate the mechanical stress generated during the production and laying process of the cable, ensure a good interface between the cable and accessories, and also reduce the shrinkage caused by the heating of the insulation after the cable is put into operation. This kind of machine heats and adjusts the cable to achieve the expected straight state, thereby ensuring the performance and reliability of the cable during construction and use.

The global Cable Straightening Machine market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
