Cable Water Blocking Yarns are specialized yarns used in the manufacturing of electrical and fiber optic cables to prevent water ingress. These yarns are typically infused with superabsorbent polymers that can swell upon contact with water, effectively blocking and sealing any gaps to prevent water from traveling along the cable and causing damage. They are crucial for maintaining the integrity and performance of cables, especially in environments where moisture exposure is a concern, such as underground or underwater installations. By using water blocking yarns, cable manufacturers can enhance the durability and reliability of their products.
