An air curtain, also known as an air door, is a specialized device installed at an entrance to create an effective barrier for controlled airflow. Ideal for industrial and commercial environments, air doors improve energy efficiency by blocking the exchange of indoor and outdoor air. They help achieve optimal climate control, reduce temperature changes and minimize the intrusion of dust, pollutants and insects. CAC type air curtains are used in situations where temperature and humidity exceed the limits of our model air conditioners. A heater unit is added to condition the air mixed in the antechamber. Model CAC automatically adjusts as conditions change to optimize performance and reduce energy consumption. By using HCR sensors and software, CAC type can be integrated into the facility's refrigeration control and monitoring system. This allows not only remote monitoring, but also remote adjustment of the HCR equipment.

The global CAC Air Curtain market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
