Cocoa is a plant that makes chocolate. Cocoa pigment is a residue of the agricultural industry and a by-product of the cocoa industry. Cocoa shell pigments are used in confectionery and bakery products due to the high value of bioactive ingredients and high nutritional value in cocoa shell pigments.

Cocoa shell pigments have found their use in the production of UV protective cotton fabrics in fabric dyeing, thereby increasing the overall demand for cocoa shell pigments. On a dry basis, cocoa shell pigments also contain a certain amount of potassium and are therefore used to make soap in certain parts of the globe. In addition to the benefits of cocoa pigmentation, it can cause chronic diseases such as inoculants if not properly treated or used as a cover in plantations.
