According to our LPI (LP Information) latest study, the global Cadmium Telluride Photovoltaic market size was valued at US\$ million in 2023. With growing demand in downstream market, the Cadmium Telluride Photovoltaic is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Cadmium Telluride Photovoltaic market. Cadmium Telluride Photovoltaic are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Cadmium Telluride Photovoltaic. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Cadmium Telluride Photovoltaic market.

Cadmium telluride solar cell, also called cadmium telluride photovoltaic or cadmium telluride thin film – a photovoltaic device that produces electricity from light by using thin film of cadmium telluride. Cadmium Telluride solar cells are less efficient than crystalline silicon devices, but are cheaper to produce and technology has potential to surpass silicon in terms of cost per kilowatt of installed capacity.

It is expected that global demand for photovoltaic products will remain high in the next few years. According to our PV & Solar Research Center, by the end of 2022, the global cumulative installed photovoltaic power generation capacity is about 1180 GW. According to the data of China Photovoltaic Industry Association, the global newly

installed photovoltaic capacity in 2022 is about 230 GW, and this number in 2023 is predicted to be 280-330 GW. According to the data of the Ministry of Industry and Information Technology, the total output value of China's photovoltaic industry exceeded 1.4 trillion yuan in 2022. From the perspective of production value, mainland China is still the global center of the PV industry. According to the International Energy Agency, China market share in all key products of the supply chain have exceeded 80%. Among them, the production capacity of silicon wafers, solar cells, and components accounts for as high as 98%, 85% and 77%, respectively. According to the data released by the European Photovoltaic Association, 27 EU countries gained a new PV installed capacity of 41.4 GW in 2022. According to the report of the US Solar Energy Industries Association (SEIA), the US held a new PV installed capacity of less than 19 GW in 2022. But it is estimated that from 2023, the average annual growth rate of new photovoltaic installed capacity will exceed 21%. In terms of Japan, based on data from Fitch and the US Energy Information Administration (EIA), in 2022, Japan's newly installed photovoltaic capacity was 3.60 GW.
