Cadmium tungstate (CdWO_4) is a high density, high atomic number scintillator with relatively high light yield. The emission maximum is at 475nm and the total light output is 12 to 15 photons/keV. The light yield relative to NaI(Tl) on a bialkali PMT is 30 to 50%. The high density and stopping power of CdWO_4 make it an efficient absorber, particularly for high energy X-ray. It takes only 3mm to stop up to 150keV photons.

CdWO_4 high light output and low afterglow make it ideal for use with silicon photodiodes in detectors for medical and industrial CT scanners. CdWO_4 has very good radiation resistance, and its temperature dependence is small in the 0 to 60°C range. Its high density makes it a good choice for 300+ keV imaging for container and vehicle scanning.
