The global CAE Pre-processing Software market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

CAE (Computer-Aided Engineering) pre-processing software refers to the tools and applications used to prepare and preprocess data for analysis in computer-aided engineering simulations. These software packages assist in the creation and manipulation of computer models, meshes, and other necessary inputs for simulations.

CAE pre-processing software typically includes features such as geometry creation and editing, mesh generation, material assignment, boundary condition definition, and model setup. It allows engineers and analysts to import CAD (Computer-Aided Design) data, clean up and simplify the geometry, and generate a suitable mesh for analysis.

The software may also provide tools for defining and assigning material properties, setting up contact and connection conditions, and defining loads and constraints. It helps in organizing and preparing the model for analysis, ensuring that all necessary inputs and parameters are properly defined.
