Calcined Soda alao called washing soda,which is an old universal and environmentally friendly cleaning product with a thousand and one uses. Dissolved in water, it becomes a caustic, or alkaline, solution, and as such, causes dirt and grease to swell in water, while hardening agents such as lime are precipitated. We can suggest only a few of its many uses here: soaking and pre-washing of plant-based fabrics; washing up, and as a partial or complete substitute for harsher, chemical detergents; radical removal of grease everywhere, removal of algae from stone paving, and disinfecting wooden shelves. A little brochure delivered with the product goes into greater detail.

It is used significantly for water softening and regulating pH. Washing soda is formulated through three different processes: the Leblanc process, the Solvay process, and the Hou's process. The Solvay process is the most cost effective and is the preferred technique for the production of washing soda. Washing soda is extensively used as a cleaning agent. It can reverse alkalinity of a solution or a media and has excellent absorption capacity.
