The global Calcium Acid Pyrophosphate (CAPP) market size is predicted to grow from US$ 90.98 million in 2025 to US$ 126 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

Calcium Acid Pyrophosphate (CAPP) is a fine white acidic powder. Insoluble in water, soluble in dilute hydrochloric acid and nitric acid. Used as a moisture retention agent in the food processing industry. Baking industry: Calcium pyrophosphate is used as a leavening agent for baked goods such as bread, cakes and pastries. It reacts with baking soda or other alkaline substances to produce carbon dioxide gas, which makes the dough or batter expand and lighten. Dairy Industry: Calcium pyrophosphate can chelate calcium ions in cheese production, thereby better emulsifying proteins and fats and improving melting properties. Meat Industry: Calcium pyrophosphate can be used as a curing promoter for cured meat products such as sausages and ham. It accelerates the reaction between sodium nitrite and meat, resulting in an ideal flavor, color and preservation effect. In 2024, global Calcium Acid Pyrophosphate (CAPP) production reached approximately 32.03K MT, with an average global market price of around US$ 2779 per MT. The production capacity of a single production line is 5,000 tons/year, and the gross profit margin is 15%-30%, which is greatly affected by raw material costs and market positioning.

The cost of raw materials accounts for about 70%-80%, and raw materials include food-grade phosphoric acid (85% H?PO?), calcium carbonate (CaCO?) or calcium hydroxide (Ca(OH)?). Energy and power costs account for about 10%-15%. Labor, manufacturing and management costs account for about 8%-12%.
