## Abstracts

The global Calcium Hydrogen Phosphate for Agriculture market size is predicted to grow from US\$ 637 million in 2025 to US\$ 815 million in 2032; it is expected to grow at a CAGR of 3.7% from 2026 to 2032.

Fertilizer grade dicalcium phosphate is mainly used for phosphate fertilizer and compound fertilizer to add raw materials. Because it has phosphorus (water soluble phosphorus) and it is cheap, it is especially suitable for reducing fertilizer raw materials cost and it has a very good effect at improving the product cost-effective and enhancing market competitiveness.

The market for calcium hydrogen phosphate in agriculture is primarily driven by its essential role as a fertilizer and soil amendment. Calcium hydrogen phosphate, also known as monocalcium phosphate, provides plants with readily available phosphorus, which is crucial for various physiological processes such as root development, flowering, and fruiting. As global population growth continues to exert pressure on food production, farmers seek efficient and sustainable solutions to enhance crop yields and quality. Calcium hydrogen phosphate addresses this need by replenishing phosphorus levels in soils, promoting healthy plant growth, and improving crop productivity. Additionally, its compatibility with a wide range of crops and soil types further fuels its demand in the agriculture sector. With a focus on maximizing agricultural output to meet the demands of a growing population, calcium hydrogen phosphate remains a vital component in modern agricultural practices.
