Camera dollies and sliders are essential tools in the world of filmmaking and video production, used to achieve smooth camera movements and dynamic shots.

A camera dolly is a wheeled platform that supports the camera and allows it to move smoothly along a set of tracks or rails. The camera is mounted on a tripod or a specialized dolly mount, which is then placed on the dolly platform.

A camera slider is a compact and portable device that allows the camera to glide smoothly along a fixed track or rail system, typically shorter than dolly tracks. Unlike

dollies, sliders are often used for shorter camera movements and are known for their simplicity and versatility.

Both camera dollies and sliders are valuable tools in a filmmaker's kit, and the choice between them depends on the specific shot requirements, budget, and logistical considerations of a production. Many filmmakers use both, as they complement each other and offer a wide range of creative possibilities for capturing compelling visuals.
