The global Camera with BSI CMOS Image Sensor market size is predicted to grow from US\$ 15941 million in 2025 to US\$ 21950 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

In 2025, global Camera with BSI CMOS Image Sensor production reached approximately 39.8 million Units, with an average global market price of around US\$ 409 per unit.

A Camera with BSI CMOS Image Sensor is an imaging device that integrates a Backside Illuminated (BSI) CMOS Image Sensor as its core light-capturing component, replacing traditional Frontside Illuminated (FSI) CIS to deliver superior low-light performance, higher resolution, and better dynamic range. The BSI architecture rearranges the sensor's internal pixel structure—placing photodiodes on the back of the silicon wafer, away from light-blocking metal interconnects—maximizing light intake and image quality across consumer, automotive, industrial, and professional scenarios.

The CMOS image sensor industry chain presents a vertical hierarchical structure with clear division of labor, spanning from upstream core material and equipment supply, midstream sensor design, manufacturing and packaging, to downstream application terminal integration. The industry has strong technical barriers, high concentration of leading enterprises, and close collaborative links between upstream and downstream links. The upstream segment provides the essential materials, equipment and intellectual property (IP) required for CIS design and manufacturing, and is the foundation of the entire industry chain. The market is dominated by a small number of international enterprises. The midstream is the core value link of the industry chain, covering three key links: chip design, wafer fabrication, and packaging and testing. The

industry is divided into two business models: IDM (Integrated Device Manufacturer) and Fabless + Foundry + OSAT. Downstream applications cover consumer electronics, automotive electronics, industrial detection, security monitoring, medical imaging and other fields. The demand of different scenarios drives the iteration of CIS technology, and the B2B field has become the main growth engine in recent years. The iteration of downstream application demand (e.g., automotive high dynamic range, industrial global shutter) drives the R&D of midstream design and upstream material and equipment technologies, forming a positive feedback loop.
