Cancer Janus Kinase Inhibitors

The conventional modes of cancer management including surgery, radiotherapy and chemotherapy were discarded as an aspirant for the future of cancer management long back ago. The arrival of modern cancer treatment modalities like immunotherapy and targeted therapy revolutionized the outlook of the future of cancer management. Amongst both of the modern therapies, targeted therapies have shown an impressive growth in a very short duration of time. The targeted therapies developed rapidly and gained much importance in the global market for cancer therapeutics due to their advantages over the conventional therapies. Targeted therapies are safer and more efficient approach for managing cancer. The only drawback for targeted therapies was that only a few targets were available for developing cancer therapeutics. The high efficacy of targeted therapeutics for cancer raised the demand for identifying new targets.
