The cancer supportive care product market consists of drugs intended to prevent or treat the symptoms of cancer, and reduce the side effects of cancer treatments. Instead of extending a patient's life expectancy, the emphasis is on improving overall quality of life. The key indications covered in this report are cancer pain, oral mucositis, chemotherapy-induced neutropenia (CIN), chemotherapy-induced anemia (CIA), chemotherapy-induced nausea and vomiting (CINV) and bone metastasis. These indications are not only distressing for patients, but can also lead to treatment cessation, which in turn increases patient mortality. As the number of people being diagnosed with cancer grows and access to effective treatment that allows patients to survive longer increases, demand for safe and effective cancer supportive care drugs will rise.
